Dear Sir:

The Applicant respectfully requests accelerated examination of the above-referenced patent application under 37 C.F.R. §1.102(c). A petition to make an application special filed under 37 C.F.R. §1.102(c) may be filed without an accompanying fee.

This petition to make the application special is deemed appropriate due to the invention's contributions to improving environmental quality and to the development of energy resources. The invention is related to solar panel arrays that provide renewable energy. The use of renewable energy from the sun greatly reduces the need for other environment polluting energy sources. The array is well suited to create electricity, which can be used to charge fuel cells or batteries. The energy may power devices such

as lights, cooling systems, or security systems. The power captured by the solar panel array may also be used to produce hydrogen for use as a fuel.

Additionally, the solar panels of the current invention contribute to the environment by providing a more aesthetically pleasing appearance while providing the functional ability to produce renewable energy. The invention is less intrusive on the environment than other solar panel configurations, leaving the surrounding environment minimally affected by the solar arrays. The solar arrays may be erected in environmentally sensitive areas without the use of heavy machinery; therefore, plant and animal wildlife will be left undamaged during construction and use of the solar arrays.

The Applicant respectfully requests the application be made special in order to accelerate its examination as provided under 37 C.F.R. §1.102(c). As stated above, no additional fee is required for this petition.

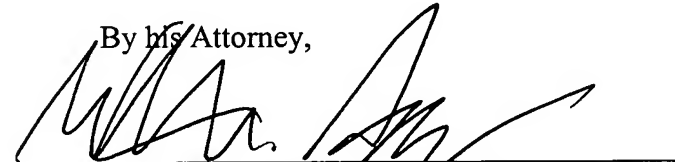

Respectfully submitted,

STEVEN CONGER
